DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19 are drawn to a method of making a no wash bead assay comprising dual reagents, classified in class 435, subclass 5 for example.
- II. Claims 20-26 are drawn to a method of manufacturing a no wash kit for carrying out a bead based assay wherein three separate reagents are employed, classified in class 422, subclass 61 for example.

2. The inventions are distinct, each from the other because of the following reasons:

The method inventions in I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, invention II employs a third reagent mixture comprising an indicator antibody that identifies the target substance. This limitation is not required in invention I. Therein the inventions/methods employ different reagents and are patently distinct. The methods are diverse and distinct having different modes of operation and different functions (assay/kit).

3. Because these inventions are distinct for the reasons given above and have acquired separate status in the art as shown by their different classification, recognized divergent subject matter and because the search required for each invention is not substantially coextensive with the search required for the remaining invention, restriction for examination purposes as indicated is proper.

Please note that the classifications in the restriction are illustrative only and do **not** represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes published foreign patents and applications as well as literature search, which in this case would be divergent for each of the claimed inventions.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventor ship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventor ship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
